

CSE 394 – Spring 2016
In-Class: Lab 5
10 Points (Due: Sunday 28th 11:59 pm)

Objectives:

- a) Further enhance the knowledge about using MapView

Lab: During this lab, we will use lab3 as the starting point and add mapView feature. Similar to lab3, you are required to have a tableView with at least 5 places. Once a location is selected, a detail view of the location is shown with a map annotated with its name (city name). Also, show the longitude and latitude of the location in two textboxes

Extra Credit (5 Points) : add a segmented controller to your detail view so that you app can toggle between standard map view and satellite map view. More details about segmented controller can be found @ https://developer.apple.com/library/prerelease/ios/documentation/UIKit/Reference/UISegmentedControl_Class/index.html

Also, you can drag and drop a segmented controller to the storyboard similar to UI objects such as button we have used before.

Submission Instructions

Submit online to the blackboard using the link given under Lab 2
